## ABSTRACT

A study was conducted to determine the following: the characteristics of state-level administrative structure for vocational education within state departments of education; the current role and the expected role of state supervisors of vocational agriculture as perceived by high school teachers and state supervisors of vocational agriculture, and the relationship between state-level administrative structure for vocational education and current and expected roles of state supervisors of vocational agriculture. A two-phase study was conducted by sending questionnaires to (1) 50 head state supervisors of vocational agriculture and (2) a random sample of 504 high school teachers of vocational agriculture in 19 states (80 percent response), and all 196 state supervisors of vocational agriculture (92 percent response). Data collected resulted in the classification of state-level administrative structure of vocational agriculture into four categories depending on degree of authority of the state supervisors. State supervisors and teachers had similar perceptions of the current role of state supervisors of vocational agriculture; they were also similar in their perception of the expected degree of authority of state supervisors at the same level as current degree of authority. Recommendations were made for further research into the actual activities performed by state supervisors and the degree and nature of contact between state supervisors and local teachers of vocational agriculture. ## STATE-LEVEL ADMINISTRATIVE STRUCTURE AND THE ROLE OF STATE SUPERVISORS

Kirby Barrick, Jr. and J. Robert Warmbrod

### INTRODUCTION

Administrative structure for educational services at the state level has changed significantly over the several years. Since the Vietnam conflict, the federal, state and local governments are struggling with problems concerning the administrative structure of educational institutions in the national arena.

The responsibility for state supervision and administration of the program of vocational agriculture was originally the Department of Education. The Department later transferred the responsibility to the State Board of Education, which was to develop a state plan for vocational education. The Department provided for state-level administration of vocational education, including a state director and state and district supervisors (Barrick, 1977).

STATE-LEVEL ADMINISTRATIVE STRUCTURE AND THE ROLE  
OF STATE SUPERVISORS

Passage of the Elementary and Secondary Act of 1965, the Vocational Education Act of 1963 and the Vocational Amendments in 1968, 1972, and 1976, brought about increased variation in administrative structures at the state level (Gentry, 1978). Divisions of vocational education within state departments of education traditionally were organized by occupational areas including agriculture, home economics, distribution, trades and industries, and business and office education; now many are organized according to functions performed such as secondary programs, post-secondary programs, adult education, special needs, and career development. The emphasis in many states has shifted from supervision of instruction to providing services. (Wenrich, 1974).

The goal of state-level supervision of vocational education is to promote, develop, maintain and improve instruction (Roberts, 1971). Roberts further enumerated the following specific activities of vocational supervisors in state departments of education: 1) assisting in the planning of state and national programs; 2) assisting teachers in improving methods of instruction and planning instructional materials; 3) securing adequate facilities; 4) organizing and improving activities of student organizations in vocational education; and 5) evaluating the results of the instructional program conducted by the local teacher. Schroeder (1962), Taylor (1961), Cornell (1976), Luther (1972) and others investigated the role of state supervisors of vocational education, but few studies addressed the role of state supervisors of vocational agriculture.

Wright (1926) indicated that the perceptions of the role of state supervisors vary greatly among the groups involved with the programs being supervised. The supervisors' perceptions of their responsibilities are important, and the perceptions of the supervisory functions as seen by the teachers being served are of major importance (Wright, 1926).

As the state-level administrative structure for vocational education changes, the role of state supervisors of vocational agriculture may change. Shoemaker (1967), Nyquist (1967), Iannaccone (1967), Rice (1967) and others have discussed the relationships of structure and the role of supervisors. These changes in administrative structure, the role of state supervisors of vocational agriculture, and the relationship between state-level administrative structure and the role of state supervisors of vocational agriculture all may have major implications for state supervision in vocational education.

## PURPOSE AND OBJECTIVES

The study was designed to answer the following questions:

1. What are the characteristics of state-level administrative structure for vocational education within state departments of education?
2. What is the current role of state supervisors of vocational agriculture as perceived by high school teachers and state supervisors of vocational agriculture?
3. What is the expected role of state supervisors of vocational agriculture

as perceived by high school teachers and state supervisors of vocational agriculture?

4. What is the relationship between current and expected roles of state supervisors of vocational agriculture?
5. What is the relationship between state-level administrative structure for vocational education and current and expected roles of state supervisors of vocational agriculture?

## METHODOLOGY

### Phase I. Administrative Structure

The study was conducted in two phases. The population for the first phase of the study was the 50 head state supervisors of vocational agriculture in the United States. The head state supervisors responded to an instrument developed to collect information regarding state-level administrative structure for vocational education. The instrument was reviewed by a panel of teacher educators and by Dr. Darrell L. Parks, State Supervisor in Ohio. Data were collected by mail questionnaire and telephone follow-up from the 50 head state supervisors.

States were categorized into four groups based on state-level administrative structure. Those groups were ordered on the basis of the degree of authority of state supervisors, the degree of direct contact with local teachers and programs of vocational agriculture, the responsibilities of state supervisors of vocational agriculture, and the location of agricultural education within the state education agency hierarchy. From the information accumulated in the first phase of the study, all 50 states were assigned to one of four groups on the basis of administrative structure. Refer to Figure 1.

### Phase II. Role of State Supervisors

The target populations for the second phase of the study were all high school teachers of vocational agriculture in the United States, 1979-80, and all state supervisors of vocational agriculture in the United States, January, 1980. Nineteen states were randomly selected from the four groups determined by type of administrative structure and by the number of vocational agriculture teachers in the state. Teachers were randomly selected from the 19 states with the sample size in each state being proportional to the number of teachers in the state and in the administrative structure group of states. The samples were 504 high school teachers of vocational agriculture and all 196 state supervisors of vocational agriculture.

The second instrument was developed to collect information regarding the role of state supervisors of vocational agriculture. Two forms of the instrument were developed. One form requested perceptions of the current role of state supervisors and of local school personnel to provide a point of contrast. Role was defined as the degree of authority of state supervisors for each of 37 statements compared to degree of authority of local school personnel. The second form requested perceptions of the expected

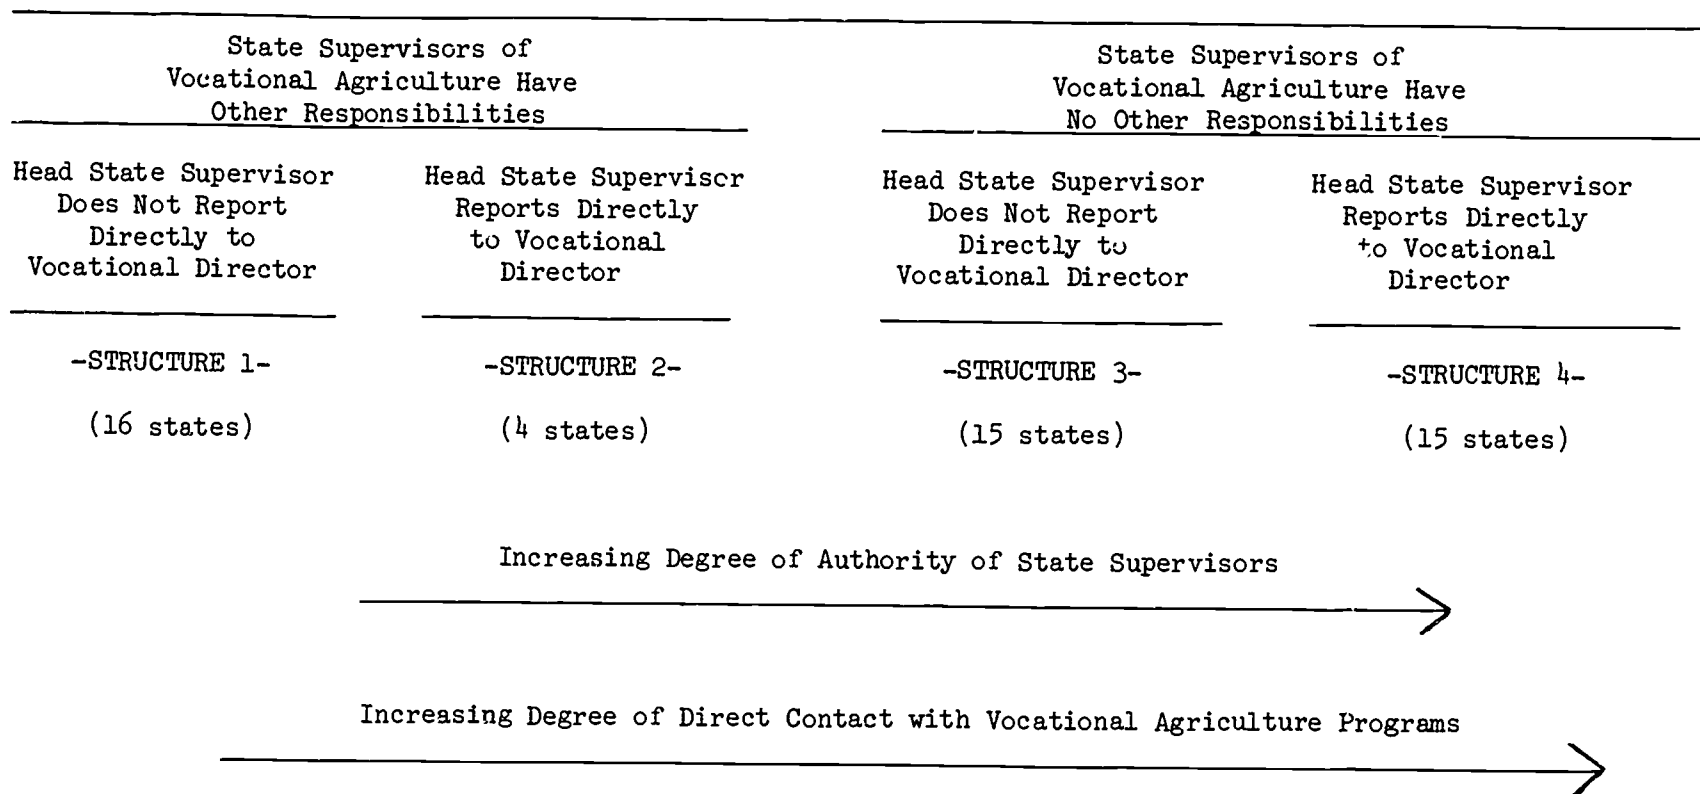

Figure 1. State-level Administrative Structure

role of state supervisors and local personnel, indicated by the degree of authority for each of the same 37 statements. One-half of the teachers in each state in the study were randomly assigned to each form of the instrument. All state supervisors within a state received the same form of the instrument, either current role or expected role. The form of the instrument was randomly assigned to each state.

The instruments were field tested with 50 high school vocational agriculture teachers in Ohio. Cronbach's alpha coefficients were computed for both instruments and reliability ranged from .81 to .94.

Data were collected by mailed questionnaire with 91.8 percent of the state supervisors and 79.7 percent of the teachers responding. The data were analyzed using the services of the Instruction and Research Computer Center of The Ohio State University.

## FINDINGS

### State-Level Administrative Structure

The 50 states were categorized into four groups based on the information provided by the head state supervisors concerning state-level administrative structure for vocational education. Two distinct groups of states were identified: states where state supervisors of vocational agriculture have responsibilities in areas in addition to vocational agriculture and states where state supervisors of vocational agriculture have no responsibilities in areas other than vocational agriculture. There were 20 states in the first group and 30 states in the second group. Refer to Figure 1.

These two groups of states were further categorized into four subgroups on the basis of whether or not the head state supervisor of vocational agriculture reported directly to the state director of vocational education. In the 20 states where state supervisors had responsibilities in addition to vocational agriculture, four head state supervisors reported directly to the state director of vocational education. The remaining 16 head state supervisors reported to someone other than the state director of vocational education. In the 30 states where state supervisors of vocational agriculture had no responsibilities in addition to vocational agriculture, 15 head state supervisors reported directly to the state director of vocational education and 15 head state supervisors reported to someone other than the state director of vocational education.

### Role of State Supervisors and Local Personnel

Teachers and state supervisors indicated their perceptions of the role of state supervisors of vocational agriculture and local school personnel (teachers, supervisors, administrators) in terms of the degree of authority of each group for 37 activity statements. Degree of authority was indicated on a scale of one (no authority for the activity) to seven (a high degree of authority for the activity).

The activity statements were grouped into four areas: administrative

activities; improvement of instruction activities; research and evaluation activities; and public relations activities. A list of the activity statements is included in Table 2 in the Appendix.

### Current Role

Supervisors and teachers did not differ in the ranking of their perceptions of the current role of state supervisors. State supervisors ranked the current degree of authority of state supervisors for the four groups of activities in the following order, with means indicated: research and evaluation (5.14); improvement of instruction (4.41); administrative (3.72); and public relations (2.88) activities. Teachers ranked the current degree of authority of state supervisors: research and evaluation (4.34); improvement of instruction (3.89); administrative (3.60); and public relations (2.77) activities. Refer to Figure 2 and Table 2.

For the current degree of authority of local school personnel, the state supervisors and teachers differed in the ranking of the four groups of activities. State supervisors ranked the current degree of authority of local personnel in the following order: public relations (6.33); improvement of instruction (5.49); research and evaluation (5.42); and administrative (5.40) activities. Teachers ranked the current degree of authority of local personnel as follows: public relations (6.00); administrative (5.36); improvement of instruction (5.25); and research and evaluation (5.24) activities. Refer to Figure 3 and Table 2.

### Expected Role

Supervisors and teachers did not differ in the ranking of their perceptions of the expected role of state supervisors of vocational agriculture. State supervisors ranked the four groups of activities as follows, with means indicated: research and evaluation (5.09); improvement of instruction (4.47); administrative (4.04); and public relations (2.90) activities. Teachers ranked the expected degree of authority of state supervisors as follows: research and evaluation (4.54); improvement of instruction (4.05); administrative (3.76); and public relations (2.88) activities. Refer to Figure 4 and Table 2.

Supervisors and teachers differed in the ranking of three of the four groups of activities according to their perceptions of the expected degree of authority of local school personnel. Supervisors ranked the four groups as follows: public relations (6.34); improvement of instruction (5.43); administrative (5.37); and research and evaluation (5.26) activities. Teachers ranked the expected degree of authority of local personnel in the following order: public relations (6.02); administrative (5.44); research and evaluation (5.34); and improvement of instruction (5.23) activities. Refer to Figure 5 and Table 2.

### Comparison of Current and Expected Roles

In comparing the perceptions of current degree of authority of state supervisors and local personnel with the expected degree of authority of state supervisors and local personnel, few differences were indicated by

Figure 2 Current Role of State Supervisors of Vocational Agriculture

Figure 3 Current Role of Local School Personnel

Figure 4 Expected Role of State Supervisors of Vocational Agriculture

Figure 5 Expected Role of Local School Personnel

teachers or supervisors. In all comparisons except one, both teachers and supervisors indicated the current and expected degree of authority for the activities at the same approximate level. The teachers indicated the current degree of authority of state supervisors for research and evaluation activities in the 3.50 to 4.49 level of the seven-point scale and the expected degree of authority in the 4.50 to 5.49 level. Generally, the perceptions of the expected degree of authority of state supervisors was higher than the perceptions of the current degree of authority of state supervisors. This generalization was not true for the degree of authority of local personnel.

#### Relationships Between Role and State-Level Administrative Structure

In analyzing the relationships between the current and expected roles of state supervisors of vocational agriculture and state-level administrative structure, Kendall's tau c coefficients were calculated. The coefficients expressed the relationship between perceptions of teachers and state supervisors on a scale of one to seven (no authority to high authority) and state-level administrative structure. Administrative structure was indicated on a continuum from low contact with local vocational agriculture programs and teachers and indirect reporting to the state director of vocational education to high contact with local teachers and programs and direct reporting to the state director of vocational education. Refer to Figure 1.

Low positive relationships, significant at the .05 level, existed between state-level administrative structure and the following (Kendall's tau c coefficients ranged from .10 to .29):

1. Teachers' perceptions of current degree of authority of state supervisors of vocational agriculture for administrative, improvement of instruction, research and evaluation, and public relations activities.
2. Supervisors' perceptions of the current degree of authority of state supervisors of vocational agriculture for administrative, improvement of instruction, and public relations activities.
3. Teachers' perceptions of the expected degree of authority of state supervisors for administrative and improvement of instruction activities.
4. Supervisors' perceptions of the expected degree of authority of state supervisors for administrative, improvement of instruction, research and evaluation, and public relations activities. Refer to Table 1.

Relationships were generally negative as expected between state-level administrative structure and the current and expected roles of local school personnel. Low negative relationships, significant at the .01 level, were found between state-level administrative structure and the current degree of authority of local personnel for administrative and improvement of instruction activities as perceived by teachers. No relationship was found to be significant between state-level administrative structure and the current or expected degree of authority of local school personnel as perceived by teachers or supervisors for any other groups of activities.

## CONCLUSIONS

On the basis of state-level administrative structure, states were categorized into four groups as follows:

### Structure 1--Lowest Degree of Authority:

State supervisors of vocational agriculture had responsibilities in addition to vocational agriculture and the head state supervisor did not report directly to the state director of vocational education

### Structure 2--Third Highest Degree of Authority:

State supervisors of vocational agriculture had responsibilities in addition to vocational agriculture and the head state supervisor reported directly to the state director of vocational education.

### Structure 3--Second Highest Degree of Authority:

State supervisors of vocational agriculture had no other responsibilities and the head state supervisor did not report directly to the state director of vocational education.

### Structure 4--Highest Degree of Authority:

State supervisors of vocational agriculture had no other responsibilities and the head state supervisor reported directly to the state director of vocational education.

State supervisors and teachers had similar perceptions of the current role of state supervisors of vocational agriculture. Both groups perceived the current degree of authority of state supervisors to be in the 3.50 to 4.49 level of authority on a seven-point scale ranging from no authority to a high degree of authority, with authority for research and evaluation activities highest. Supervisors and teachers perceived the current degree of authority of local personnel to be highest for public relations activities.

Supervisors and teachers were also similar in their perception of the expected degree of authority of state supervisors. Both groups perceived the expected degree of authority of state supervisors to be at the same level as current degree of authority, with the highest expected degree of authority for research and evaluation activities. Supervisors and teachers perceived that the highest expected degree of authority of local personnel was public relations activities.

There was no difference between the perceptions of the current and expected roles of state supervisors as perceived by teachers and supervisors. There was little difference between the perceptions of the current and expected roles of local school personnel as perceived by teachers and supervisors.

State-level administrative structures which were expected to result in more authority were found to indicate that there were low positive relationships

between state-level administrative structure and the current degree of authority of state supervisors for certain groups of activities as perceived by teachers and state supervisors. There were also low positive relationships between structure and the expected degree of authority of state supervisors for certain groups of activities as perceived by teachers and supervisors.

There were low negative relationships between state-level administrative structure and the current degree of authority of local school personnel for certain groups of activities as perceived by teachers.

## RECOMMENDATIONS

Further investigation into the actual activities performed by state supervisors, particularly in the area of improvement of instruction, is needed. In addition, there may be other persons such as local vocational agriculture supervisors, local vocational supervisors, general supervisors and administrators, and teacher educators who are or should be performing the activities that state supervisors of vocational agriculture perform.

Research is needed to identify and describe the barriers that prohibit supervisors from performing supervisory activities. The perceptions of local school personnel such as local supervisors and administrators concerning the role of state supervisors should be identified and described.

Research is needed to identify and describe the degree and nature of actual contact between state supervisors and local teachers and local programs of vocational agriculture. Additional research is needed to identify other factors that may be involved in the relationship between state-level administrative structure and the role of state supervisors. Those data may include organization of the total state education agency, sources of funding for state and local vocational agriculture programs, and the organization of local school districts including provisions for local supervision.

## SUMMARY OF RESEARCH SERIES

Supervision in agricultural education has undergone considerable change in recent years. Commitment to supervision has eroded at federal and state levels. State supervisors have appeared to have less contact with local programs and have had less authority because of increased local responsibilities for program management. Few research studies have been conducted concerning the nature of supervision or the role of supervisors. The profession should be aided by the information provided by this study.

This summary is based on a Doctor of Philosophy program by R. Kirby Barrick, Jr. under the direction of J. Robert Warmbrod. Dr. Warmbrod is currently a Professor and Head of the Department of Agricultural Education at The Ohio State University. Dr. Barrick is an Assistant Professor at The Ohio State University. Special appreciation is due Charles C. Drawbaugh, Professor, Department of Vocational Technical Education, Rutgers, The State University of New Jersey; Dr. Rosco V. Vaughn, State Supervisor, State Department of Education, New Mexico State University, and Dr. Darrell Parks, Assistant Director, Vocational Education, Agricultural Education Service, Columbus, Ohio, for their critical review of this manuscript prior to its publication.

Research has been an important function of the Department of Agricultural Education since it was established in 1917. Research conducted by the Department has generally been in the form of graduate theses, staff studies and funded research. The purpose of this series is to make useful knowledge from such research available to practitioners in the profession. Individuals desiring additional information on this topic should examine the references cited.
